

Custom Glycoprotein Production in *Pichia pastoris*

NEW

VTU's platform boosting the production of proteins with human-like glycosylation using *Pichia* GlycoSwitch®

- Uniform glycoproteins with Man5- or other human-like- glycoforms
- Unrivaled production levels through VTU's yield enhancing *Pichia pastoris* protein production platform
- Production of tailor-made glycoproteins & elimination of yeast-like glycosylation

www.vtu-technology.com

Broadest toolbox and most versatile *Pichia pastoris* technology platform

SELECTED SPOTLIGHT

High-level, methanol-free protein production –
VTU's 2nd generation PAOX1 promoter variants

- Abolishing toxic and explosive methanol while retaining high expression levels of up to 20 g/L (secreted)
- Glycerol or glucose as the sole carbon source
- Lower cost of goods through less cooling demand and reduced process time
