SKYEPHARMA, A USER EXPERIENCE FEEDBACK

ACCELERATE TIME TO MARKET

THE ULTIMATE SOLID DOSAGE TOOL TO

COMPANY INSIGHT

Need to accelerate the time to market while avoiding cost inflation can be a major challenge for pharmaceutical companies. Skyepharma, a member of the Vectura group of companies, has been able to answer this challenge by leveraging their unique expertise in the field of tablet development and scale-up. By investing in advanced technologies such as the STYL’One Evolution, Skyepharma has been able to provide a package that allows their clients to access market quicker, without cost inflation.

Skyepharma has a long history of modified release products. The combination of its expertise, its investments in the latest technologies, and its ability to respond to the needs of its clients have been key in its ability to meet the demands of its clients. Skyepharma’s aim is to be present in all key solid dosage markets and to provide the best possible product to its clients. Skyepharma has been able to achieve this by integrating STYL’One Evolution into its manufacturing process.

The STYL’One Evolution is a high shear mixer, fluid bed drier, and dry granulator. It is installed next to the industrial tablet presses, allowing Skyepharma to conduct comparative studies on commercial products to assess process correlation with industrial presses. This allows Skyepharma to conduct thanks to the accuracy of the STYL’One Evolution, allowing efficient screening of different solutions that could be used to produce tablets at very small scale under highly controlled conditions.

The reliability of the STYL’One Evolution allows us to test solutions quickly and to implement on conventional presses. For instance, new punch tooling could easily be tested with a small punch press. For instance, new punch tooling could easily be tested with a small punch press. This allows Skyepharma to focus on analysis of the target product profile, making a package that allows the client to access market quicker, without cost inflation.

Skyepharma has conducted comparative studies of dissolution profiles of the various ingredients tableting characteristics. This allows efficient screening of different solutions that could be used to produce tablets at very small scale under highly controlled conditions. Skyepharma has been able to achieve this by integrating STYL’One Evolution into its manufacturing process.
