

EnviCheck

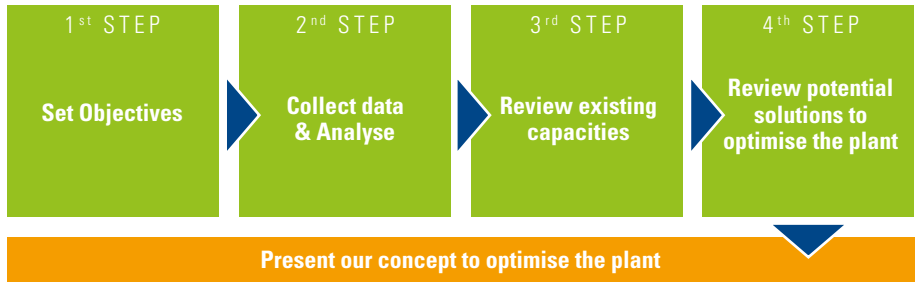

The check up for your
water & wastewater treatment plant

EnviCheck

We work to review the performance of existing water or wastewater treatment plants and provide effective solutions to improve the systems capabilities.

4 step EnviCheck optimisation process

Objectives (examples):

- Checking processes and plant technology
- Reduce water consumption through recovery of wastewater streams
- Cost reduction by reducing sludge volumes, energy and chemical consumption
- Meeting trade effluent consent limits
- Reviewing the WWTP's capacity according to new hydraulic/pollutant loads.

Important: EnviCheck can also be carried out at plants that were not built by EnviroChemie!
